

List of all known bugs, if you list them here then you won't lose points

KNOWN BUGS:

1. If picture upload is large enough, it crashes the server
2. Some fields do not check for size, so inputting long values can crash them
3. If you are on profile page and then go to a different page, error message says "user does not exist" and redirects to index page
4. Confirmation link to reset password gives an error
5. If a user creates a listing without a wallet, the website crashes
6. Listings don't display pictures

META MASK BUGS

1. If user doesn't have MetaMask installed on browser, some pages may not work correctly
2. If user doesn't log into MetaMask, some pages may not work correctly
3. If user is not on Ropsten Network, some pages may not work correctly
4. If user creates a listing without metamask, viewing the listing will break the website
5. View listing may be buggy if user does not have metamask
6. Viewing your own market listing without metamask will tell you to "download metamask to buy this listing" even though you cannot buy your own listing
