

Sprint Report 1

UniToken, University Token, 2/1/2018

Actions to stop doing:

- The team should stop procrastinating because it puts pressure on future sprints and jeopardizes the schedule.
- The team should stop interrupting each other during ALWAYS because everyone should have a chance to speak.
- The team should stop forgetting to assign all tasks because there is confusion at the end of the sprint.
- The team should stop flipping off other team members because its offensive and rude.
- The team should stop going off topic during SCRUM meetings because that's not how scrum works.

Actions to start doing:

- The team should start showing up to scrums on time because it affects other members and our productivity when members are missing during a scrum.
- The team should start being more accurate when estimating work hours for a task because this ensures that the team can meet deadlines at the designated time.
- The team should start making sure that the scrum board and burnup chart are updated every scrum so that all members and TAs know what the progress of the project is.
- The team should start updating github with their current code because this allows TAs and other members to follow the progress of the sprint.

Actions to keep doing:

- The team will keep updating the team on Discord because this helps the other members know the progress of the team outside of scrums.
- The team will continue having thoughtful discussions after scrum to work out any problems or roadblocks because this prevents any confusion in future meetings.
- The team will continue to include useful online tools that prevent members from writing code from scratch because it saves time and effort.

Work completed:

- As a user, I want to be able to visit the ICO website.

Work Not Completed:

- As a user I want to have a personal wallet so I can store UniTokens.
- As a user, I want to be able to create an account so that I can use the product.
- As a developer, I need to be able to store user account data in a database so that I can store user information.
- As a developer, I want to have a cryptocurrency so that I can test it.

Explanation of User Stories Not Completed:

- Most of the uncompleted user stories have most of their tasks finished but some tasks were accidentally unassigned to members or the workload was underestimated and could not be finished in the first sprint. Also, one of the user stories was assigned to a member who dropped the class and this user story was not assigned to another member.

Work completion rate:

- User Stories Completed: 1
- Total Number of Hours Completed: 55
- Days in the Sprint: 9
- User Stories per Days: 1/9
- Ideal Work Hours per Day: 4.5
