

## Coding Styles

- Tab for an indent
- Functions and brackets are on the same line
- Camelcase when appropriate (variables start with lowercase, functions start with uppercase)

### SQL

- Use underscore to separate words in table names / identifiers
- Use uppercase for SQL commands, lowercase for tables / identifiers

### HTML

- Declare the document type at the top of the html file
- Keep class names short but descriptive
- Avoid long lines of scroll, don't make user scroll to the left and right to read lines
- Only add blank lines for readability between large amounts of code, not after every line
- Indent nested elements

### CSS

- Use only lowercase

### Javascript

- Explicitly declare variables using "let" or "var"
- Use <http://jsbeautifier.org> for styling
